

ELON SUSTAINABILITY

SUSTAINABLE LIVING GUIDE

COMPOSTING & RECYCLING

What Is Compostable?

Food scraps, paper towels, napkins and labeled serveware from dining halls are all compostable!

What Can You Recycle?

Single Stream: all paper, glass, metal and plastic, except rigid plastics smaller than 2" x 2" and thin plastics like plastic bags

Other: thin plastics, textiles, cardboard, printer cartridges, household batteries, small electronics and writing instruments.

WHERE CAN I COMPOST & RECYCLE?

Compost bins are located outside of most dining locations and in various locations throughout campus. Compost bins are typically designated with orange lids and bags and/or labels.

Cardboard: Anywhere there is a campus recycling bin; break the cardboard down and place it behind or next to the recycling bin.

Various Items: Thin plastics, household batteries, printer cartridges and small electronics can be recycled in the Moseley Center and the Belk Library among other places.

For a full list of recycling locations, please see elon.edu/sustainability.

TRANSPORTATION

Elon Express: These buses run on biodiesel fuel, which is a blend of biofuel (from vegetable/animal oils) and ultra-low sulfur diesel fuel. The routes service campus, local apartment complexes and shopping centers, and downtown Burlington. See elon.edu/transportation for more information.

Car Share: The Zipcar program allows members to "rent" a car when they need one for hourly or daily use. Visit zipcar.com/elon to join.

Share the Ride NC: This program provides an Elon-specific online network to help users find carpool partners. The program is FREE to students, faculty and staff. See elonuniversity.sharetheridenc.org to join.

Save energy and enjoy the fresh air by walking or biking to class. Campus Recreation & Wellness has bike rentals available for \$25/semester or \$50/year.

ENERGY

Visit buildingos.com/s/elon/campus to view the real-time electricity consumption of many buildings on campus.

Use natural light instead of overhead lights when possible. Open your blinds and allow natural light to warm your room.

Switch out your lightbulbs for LEDs. LEDs use 75% less energy and last 25 times longer than incandescent bulbs.

Unplug all appliances when not in use, such as computers, toasters, hair dryers, TVs, coffee makers, etc.

EATING & DINING

Cut down on your meat and dairy consumption. Large-scale livestock and dairy facilities have substantial environmental impacts.

Eat sustainably and locally produced foods when you can. Eating foods that are in season also reduces the environmental footprint and resources needed to transport food from far away places.

Only fill your plate with as much as you can eat to limit food waste. You can always go back for seconds!

CONSCIOUS PURCHASING

Support recycled clothing by shopping at local thrift stores or vintage shops.

Research brands and labels. Labels like "100% natural" aren't always true.

Join UCapture, a green-tech platform that funds environmental projects and applies coupon codes, at no cost to you, when you shop with over 7,500 online stores. Download the free browser extension at ucapture.com/elon.

WATER CONSERVATION

Turn off the water when you are shaving or brushing your teeth. Take shorter and cooler showers to save water and energy.

Report all leaks and faulty toilets to Physical Plant by completing a work request via elon.edu/fixit.

Use the dishwasher and washing machine with full loads to optimize water usage.
